INTEGRATED RESOURCES

GROUP LIMITED

Quarterly Activities Report For the three months ended 30 June 2013

Integrated Resources Group Limited (ASX: IRG, "IRG", "the Company") is pleased to report on activities for the June 2013 quarter.

Lyndon Project Review & Site Trip

During the quarter a site trip to the Lyndon Project and a desktop review was undertaken in order to develop a future plan for exploration.

The site trip was performed at the end of May and included an inspection of the tenements, including the Lyndon Bettina pits, Eric's Find and the locations of prior RC drill holes, and an inspection of RC drill chips stored near the project site.

Figure 2- Lyndon Bettina Pit Facing North

Following the trip to site, a detailed review of the Project was undertaken which included re-analysis of historical drilling and regional geophysical data. The desktop review identified a new prospective target area, a magnetic 'Bulls-eye' anomaly, to the south of the Project area which has been applied for by the Company.

Figure 3 - Aero magnetics map of Lyndon Project tenements with the Bulls-eye anomaly circled in red

Recommendations for future work have been made as a result of the Project review that includes a ground magnetic survey on the Lyndon Bettina Prospect and the new Bulls-eye target and to conduct further reconnaissance and rock chip sampling on the Broken Thumb – Thirty Bob structure. The Company is considering exploration options.

Further, the review identified a number of unprospective areas within the Project that were subsequently surrendered by the Company. Including the additional ground granted detailed above, this area reduction has resulted in a total reduction in the project area, which will reduce the tenement holding costs to the Company going forward. Refer to Figure 4 for a map showing the changes to the Project area.

For more detail please refer to the 'Exploration Update' announcement made to the ASX on 26 June 2013.

Lyndon Gold & Copper Project

The 100% owned Lyndon gold, silver and copper prospects are located in the Gascoyne Region, approximately 300 km northeast of Carnarvon. Three contiguous granted tenements contain a cluster of high grade workings dating back to the 1950's that had not been drilled at depth nor explored by modern techniques.
